# PAIN MANAGEMENT

## Ira Fox, MD, DABPM, FIPP, ABIPP

### COLLEGE

Tulane University, New Orleans, LA

### MEDICAL SCHOOL

U.A. of Guadalajara, Guadalajara, Mexico  
State University of New York at Stony Brook

### CHIEF RESIDENCY

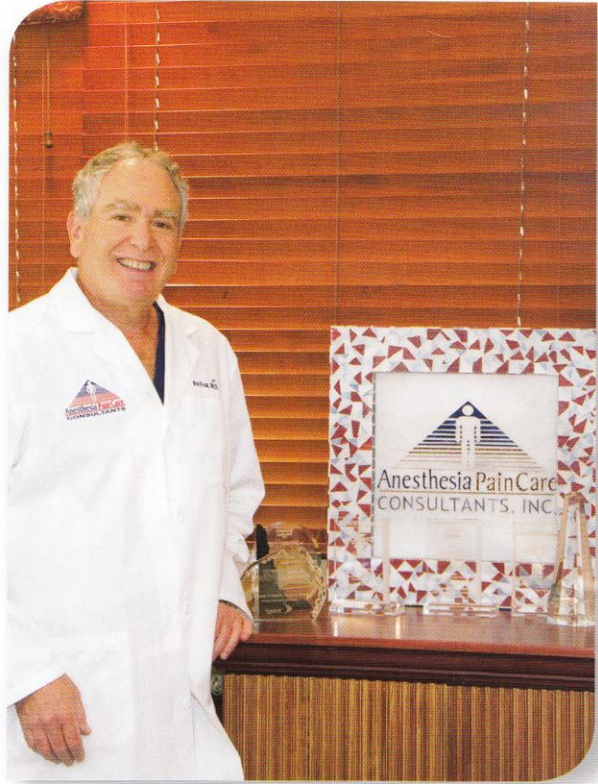

Monmouth Medical Center, Long Branch, NJ

### BOARD CERTIFICATIONS

American Board of Interventional Pain Physicians (ABIPP);  
World Institute of Pain, Fellow of Interventional  
Pain Practice (FIPP); American Board of Pain Medicine;  
American Board of Anesthesiology with Certification  
in Pain Management

### ADDITIONAL DISTINCTIONS

Chairman of the Advisory Board for the  
World Institute of Pain Executive Board,  
Examiner for FIPP Certification,  
World Institute of Pain (WIP) Foundation Board of Trustees,  
President Elect of the World Society of Pain Clinicians (WSPC)

**A** leader in the field of interventional pain, Dr. Fox works internationally to educate and collaborate with fellow physicians on the most advanced techniques for treating patients. He was elected Chairman of the Advisory Board for the World Institute of Pain Executive Board, a prestigious position he will hold for two years. Most recently, he was appointed to the World Institute of Pain (WIP) Foundation Board of Trustees. He is also President Elect of the World Society of Pain Clinicians (WSPC).

Dr. Fox has been treating patients in pain for more than 20 years. He and his partner, Dr. Jay Lasner, founded Anesthesia Pain Care Consultants (APCC) in 1996, to focus on interventional pain care, and since then, they have treated more than 50,000 patients. The goal was – and still remains – to offer long-term pain relief for patients without dependence on surgery or medication. He has found the perfect formula – dedicated physicians, modern technology and extensive experience. These elements combine to reduce pain associated with new injuries, accidents, spinal fractures, cancer, chronic spine conditions and prior spine surgery.

Physicians utilize numerous interventional procedures including radio frequency, lysis of adhesions, epidurals, nerve blocks, vertebroplasty/kyphoplasty and spinal cord stimulation, to treat a wide array of conditions including arthritis, sciatica and spinal stenosis. When indicated they are also able to provide options within the field of minimally invasive spine surgery. Non-interventional treatments such as physical therapy, psychological counseling and medication management are also used when necessary.

“Many people live with chronic pain because they believe they have no other option,” said Dr. Fox. “At APCC, we are committed to incorporating the latest technology and developing new applications for previous methods to help patients who never thought relief was possible. Our goal is to dramatically decrease pain, and dramatically decrease the number of people in pain.”
