- Examiner for FIPP Certification and ABIPP Interventional Practical Examination
- World Institute of Pain Foundation Board of Trustees
- Executive Examiner, 1st Annual American Academy of Pain Medicine Ultrasonography
- World Institute of Pain Inaugural Chairman of the Committee on Project Development

Dr. Ira Fox has developed a worldwide reputation as a leader in interventional pain medicine. He educates and collaborates with physicians around the globe on the most advanced techniques for treating patients with chronic pain conditions.

In 1996, Dr. Fox co-founded Anesthesia Pain Care Consultants (APCC) to focus on interventional pain care. His goal has always been to offer long-term pain relief. His dedication and expertise have attracted skilled and committed physicians. They utilize the latest techniques and technology to reduce pain associated with injuries, accidents, cancer and chronic spine conditions such as pain resulting from failed neck and lumbar spine surgeries.

"We provide hope for people living with chronic pain who

believed that they had exhausted all of their options," said Dr. Fox. "At APCC, we use a wide array of techniques and technologies that we have helped perfect over the years. It is so rewarding to see our patients function again, get back to work and live life to the fullest."

APCC physicians utilize interventional procedures including radio frequency techniques, lysis of adhesions, epidural injections, nerve blocks and spinal cord stimulation to treat a wide array of conditions including arthritis, sciatica and spinal stenosis. In addition, our physicians can provide stem cell therapy which can be especially effective for patients suffering from degenerative conditions, and can result in decreased pain with improved function and mobility. When indicated, doctors provide options within the field of minimally invasive

spine surgery. Non-interventional treatments such as physical therapy, psychological counseling and medication management are used when needed.

"We are firmly committed to our mission – decrease pain and decrease the number of people in pain," said Dr. Fox.
